

# REPOSSESSION REDUCING RECOVERY TIME

Don't Gamble With Your Trailers! Use our Cutting-Edge, Long-Life, 5000-Ping Tracker to Protect Your Assets

## NEED TO PURSUE A TRAILER QUICKLY TO RECOVER IT?

Get instant alerts every 7-8 minutes with locations, speed and direction of travel.

**KEY 1: GUARANTEED 5000-PING Battery means more location updates, more often, and for longer.**

What could you do with 5000 pings? Most trackers only give you 1,800 pings, which means they die quickly, so you have to be very conservative with how often you get location reports. But, with the PingMaster5000, you might use those pings slowly over 12+ years with just a daily ping, or get 4 pings/day for 4 years, or choose a ping every 7-8 minutes when in hot pursuit of a trailer that you need to recover. 5000+ pings means you have options!

### PING PER DAY COMPARISON

GPS Provider	Battery pings	1 Ping per day	2 Pings per day	4 Pings / Hour	6 pings per hour
 PingMaster 5000 WIRELESS GPS TRACKER PingMaster5000.com	5000	Over 10+ Years	About 7 Years	52 days	35 days
Competitor	1460-1825	5 Years	2 and 1/2 Years	19 days Max	Not Offered

## KEY 2: Instant Location Alerts

Get instant alerts for any trailer movement or theft just by clicking "Security Mode" ON anytime from your phone or computer. Then, if the trailer moves, the tracker will immediately switch to HotPursuit Mode and ping every 7-8 minutes to closely track the trailers movements

- See the location, speed and direction of the trailer on every ping.
- Repossession: Register your repo driver as a sub-user so they can see reports for a specific tracker on their phone to easily repossess their assigned trailer.
- Stolen Trailers: Give access to these updates to police to immediately recover the trailer.

## KEY 3: Daily Location Updates

Monitor your trailers' locations with regularly scheduled updates, such as 1-2 times per day, every 4-6 hours, every hour, or even every 5 minutes when in hot pursuit.

## KEY 4: MoveGuard Motion-Sensing Technology

Our exclusive MoveGuard motion-sensing technology instantly pings when the trailer starts or stops moving for immediate updates.

- Ignores unimportant movements like yard moves or gusts of wind
- Only receive alerts for important movement that you care about, like theft, pick-up and drop-off times, or entering or exiting geofence perimeters, etc.
- Custom settings - manually click it ON or OFF from a phone or computer, or set it on an automatic time schedule.
- Parked: Know whenever a trailer is parked, and for how long
- In-Motion: track which direction, and at what speed trailers are moving

## KEY 5: Geofence for No-Go Areas

Create unlimited virtual geofence perimeters around any important area to monitor, such as "no-go" areas like rough terrain, steep windy roads, or state or national borders.

- As soon as the tracker exits or enters the geofence, you will automatically receive an alert
- Automatically receive more frequent ping updates when a geofence is triggered, from every 4 hours to every 8 minutes, whatever you choose.

## KEY 6: Back-Up Locating Technology

Uses Wifi "Sniffing" and Cellular Triangulation When There Is No GPS Signal.

Receive an approximate location based on nearby wifi networks or cell phone towers, when other trackers cannot offer any location at all, like when the trailer is in a metal building or the GPS satellites signals are weak.

## KEY 7: Completely Customizable

Adjust the settings for each tracker: reporting schedule, motion-sensing settings, put desired features on custom timers (like turning on geofence alerts every night from 9pm-6am, etc.)
